

Dr. Edward Moss is a developmental neuropsychologist, and former founder and Director of Developmental Neuropsychology at The Children's Hospital of Philadelphia (CHOP). Dr. Moss specializes in assessing the effects of genetic disorders on cognitive and emotional development, and since 1994 has been working with children and families affected by 22q11.2 deletions and duplications. Now that many of the children he follows have aged into young adulthood, he has turned his attention to their interests in continued academic pursuits, career planning, and increasing independent living skills
